

Phishing Email Detection & Awareness Report

This report analyzes three email samples and classifies them as Safe, Suspicious, or Phishing. The objective is to identify common phishing indicators and improve security awareness.

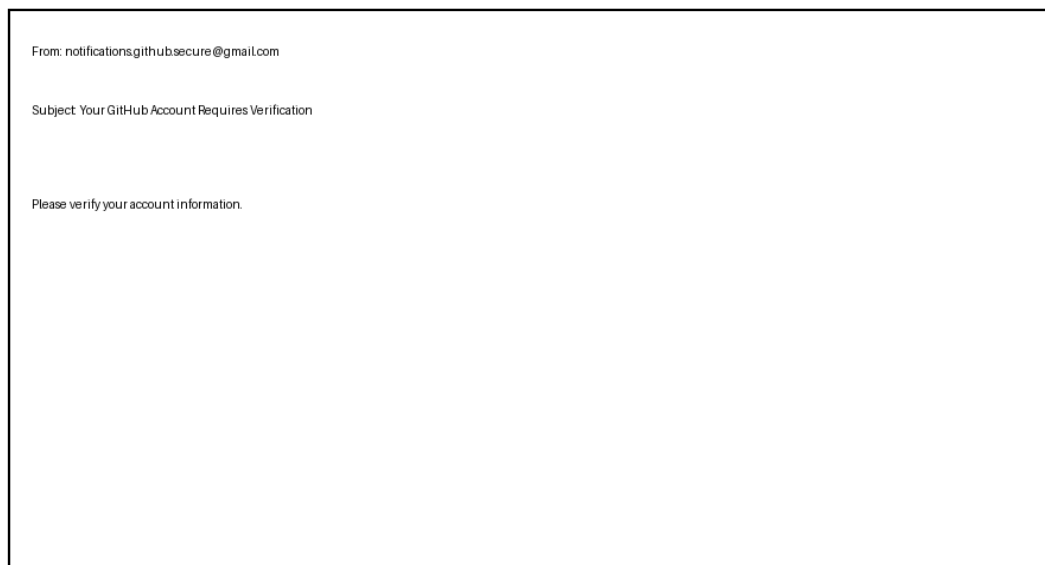

Email Sample 1 - Safe

Classification: Safe

Analysis: Official domain, professional formatting, no suspicious behavior.

Email Sample 2 - Suspicious

Classification: Suspicious

Analysis: Uses a Gmail address while pretending to be a company account.

Email Sample 3 - Phishing

Classification: Phishing

Analysis: Fake domain, urgent language, attempts to trick users into clicking links.

Prevention Guidelines

Verify senders, avoid unknown links, enable MFA, and report suspicious emails.
